The militarization of space is already underway, with unpredictable consequences for the way war will be conducted in the future. *Military Space Power: A Guide to the IssueS and Lt;* examines the militarization of space from historical, technological, and geopolitical angles. It traces space militarization from concepts proposed before World War II through the use of space for military surveillance and communications purposes to the actual deployment of weapons that pass through high-altitude space, such as ballistic missiles and nuclear-armed interceptors. The book focuses on the main space pioneers like the United States, Russia, and China, but also includes discussion of potential future players. It looks at the state of current space technology, but also projects how recent inventions or new discoveries might be weaponized for the space environment.
