If you believe the plate to be over-exposed, start with two drachms of iron instead of three; then, if the image comes up too slowly, add more iron, but never more than one part to four of the oxalate. The best plan is to time every plate just right. For this reason it is a good scheme to start with a small outfit, as you can spoil four 4x5 plates at the same expense as one 8x10. This can be done with the larger instrument, by the use of a reducing kit for the plate-holder. Pyro Developmenti We have described the ferrous-oxalate development, because it has been regarded as the most simple and easily managed, and for that reason esCHEMICALS. 79 pecially adapted to the work of amateurs. There is, however, a newer method of development, which has important advantages in several respects, called the Pyro development--Pyro, being short for pyrogallic acid. This developer is more rapid than the other, and can be strengthened to any required degree, for instantaneous or insufficient exposures, without danger of precipitation. It is believed to produce a softer negative than the oxalate with fuller detail, and without material loss of brilliancy. ChemicalSi The chemicals for Pyro development are: Pyrogallic acid (Schering s), which is a white powder, very light and dry. Sulphite of soda, which comes in one pound bottles and must be kept stopped from the air, as it..
