The fact that the projection is of the same length as the perpendicular line depends upon the condition that the picture plane cuts the projecting lines at an angle of 45. But the direction of the projection depends upon that of the visual ray. Thus if the eye be still at an infinite distance, but in the direction at, the projection will have the direction co, but its length will remain equal to ca.-Thus the direction of the projecting lines may be parallel to any element of the cone whose axis is ca, the angle at the vertex a being 90, since all these elements make angles of 45 with the picture plane MN. 217. Now any line which lies in the picture plane is its own projection. In representing a cube, therefore, as in...
